

Can you make some observations about your organism?  
Use the prompt questions below to help you.

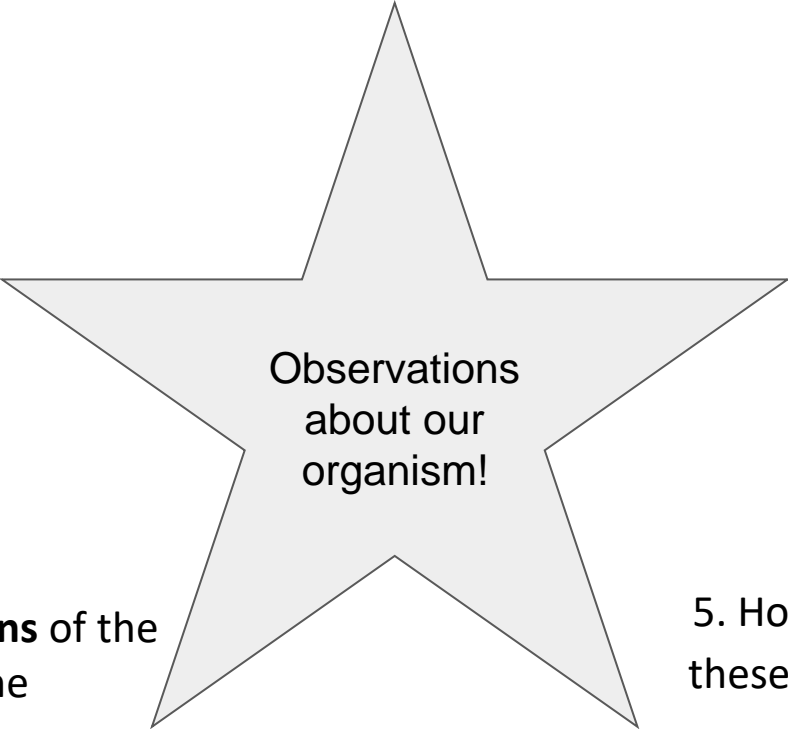

1. Describe its **structure** (e.g. shape/ size/weight)

2. What do you notice about the **fine details** of the organism (when you look really closely)

3. What are the **functions** of the organism (e.g. what is the organism's purpose?)

4. Describe its **movement**

5. How might we be able to **use** these functions to solve real-life challenges?

Observations  
about our  
organism!
